$\tau_p = 0.1$ s: physical event and equilibrium-chord section
Full event projection
No basin samples outside
the colored rectangle
Bus6: 0 rad
Remote mean Δf (Hz)
Remote mean internal angle relative to Bus6 $\bar{\delta} - \delta_6$ (rad)
Local section
Saddle equilibrium
(on this section)
Remote mean frequency deviation Δf (Hz)
Remote mean internal angle relative to Bus6 $\bar{\delta} - \delta_6$ (rad)
Original phase branch (22 points)
Changed phase branch (11 points)
Mixed sampled branch outcomes
Stable equilibrium
Saddle equilibrium
Unresolved / other (1 points)
Fault-on projection
Post-fault projection
Fault application
Clearing
Event curves are coordinate projections; their full states can lie off the section.
