Voltage-adjusted case, k=0.80, $\tau_p = 0.1$ s; both equilibria lie on the chord section
Section and fault trajectory projection
Equilibrium / saddle neighborhood
Mean frequency deviation [Hz]
Mean internal phase relative to Bus6 [rad]
Recovery: same branch
Recovery: changed branch
Negative running
Mixed sampled outcomes
Post-fault projection
Fault-on projection
Stable root
Saddle on section
55 DAE-consistent initial states; 30/60/150-s classification. Actual trajectories are projections, not constrained to the section.
