mp=1% on common base; B=1.0 pu, k=0.68127303, pre-fault V5=0.9966 pu; identical 83 initial states for both taus
$\tau_p = 0.5$ s: wide view and event projection
$\tau_p = 1$ s: wide view and event projection
$\tau_p = 0.5$ s: equilibrium / saddle detail
$\tau_p = 1$ s: equilibrium / saddle detail
Mean frequency deviation [Hz]
Mean internal phase relative to Bus6 [rad]
Recovery: same branch
Recovery: changed branch
Negative running
Unresolved
Mixed sampled outcomes
Post-fault projection
Fault-on projection
Stable root
Saddle on section
Chord section contains both equilibria. Actual trajectories are projections. Classification at 30/60/150/300 s; hatching is not a verified boundary.
