Voltage-adjusted setting: equilibrium search preceding the basin calculation
Local steady-state fold: B=0.0042813
Requested B=0.55618: 0 roots / 642 guesses
Branch from original stable root
Branch from original saddle
Root acceptance: residual < 1e-8
Mean internal phase / Bus6 [rad]
Added shunt susceptance B [pu]
Number of initial guesses
log10(maximum steady-equation residual)
